* The psilocybin and psilocin indoles, like those of LSD, rapidly (within one hour of ingestion) produce CNS effects, including ataxia, hyperkinesia, visual illusions, and hallucinations. Some patients manifest gastrointestinal distress, tachycardia, mydriasis, anxiety, lightheadedness, tremor, and agitation. * Most manifestations are recognized within 4 hours of ingestion with a return to normalcy within 6 to 12 hours. * Rarely: acute kidney failure, seizures, and cardiopulmonary arrest	Benzodiazepines for agitation	Gymnopilus spectabilis	Laughing gym	Agaricomycetes Hymenogastraceae	CNS	Psilocybin Psilocin
